Open Innovation at Mozilla

Tristan Nitot
Open Innovation is...
democratizing
Innovation
Today

• Open source is the poster child for a truly open innovation system and thus widely studied – often with direct references to Mozilla (*)&

• Mozilla thrives on its open, participatory, meritocratic (and sometimes chaotic) innovation processes

• Mozilla has 230m users with 1,000+ Code Contributors (-> User Innovators) and 8,000+ Add-Ons (-> Ffx/Tbird as a product platform)

*e.g. by Chesbrough, v. Hippel and Lankhani
Behind the Curtain

- Yet Mozilla - as most other open source projects - struggles with the fact that innovation is coming from a relatively small (in comparison to its user base) core of contributors.

- Furthermore, the vast majority of these innovators are coders – which means...

- Mozilla misses out on massive innovation potential!
Where do we want to go?
Our Vision

• Make innovation truly open and participatory:
  • Create a framework/tool/space for open, participatory innovation
  • Tap into (new) lead user bases in diverse disciplines
  • Foster dialog and cross-pollination
  • Create an open and freely shared innovation repository
What this means for Mozilla?

→ More Innovators
→ More Innovation
How do we get there?
Framework

- Development of a robust and scalable framework for innovation in a truly open, collaborative and sharing environment
- Framework to be based on current research, best practices and working implementations
- Framework will be available under an open license
Tools / Space

- Development of a set of tools to facilitate the multiple aspects of innovation
- Creation of an open innovation space for the wider Mozilla community
- Creation of a repository of ideas/mockups/prototypes
- All tools & information to be released under open licenses
Communicate

- Create and foster dialog about open innovation – with a special focus on the very nature of Mozilla and how this differs from other open innovation efforts
- Create programs to spread the “invitation to innovate” to a wide and diverse group of people
Early results
Events & Programs

- Mozilla Labs nights (California)
- Mozilla Labs Café (Paris and London)
- Concept Series (Online)
Technology

- **Ubiquity**: command line & local mashup
- **Personas**: light theming of Firefox
- **Weave**: sync profiles between Firefox instances
- **Bespin**: online collaborative text editor
...now let's participate!
Thank you!
