**Subject:** Firefox Nightly 50 build - Pointer Lock API improvement Sign Off  
**Attachments:** Untitled attachment 00044.txt

Hi,

Please see below the current status for the **Pointer Lock API** improvement feature - remove the permission requirement for PointerLock is enabled:

**Testing Status:** **COMPLETED**

All the available tests were executed, on Nightly 50.0a1, across the following platforms: Windows 7 x64, Windows 10 x32, Ubuntu 15.04, Mac OS X 10.10

Additional exploratory/smoke tests were performed after fix of bug [1287408](#)

**1. Overall build status after testing:** **GREEN** - No blockers or major bugs found

Apart from a few already known bugs, there was 1 new issue logged with high impact - [1287408](#) (reproducible on all platforms). This was fixed and verified on Nightly 50.0a1 on all Platforms.

**2. Recommendation from QE:** **SIGN OFF**

Based on the test results, we are signing off on this feature for release to Aurora.

### 3. Manual Testing Summary:

- Focus area:
  - The permission requirement notification was disabled
  - A warning bar is displayed with message "<site> has control of your pointer. Press Esc to take back control." when pointer lock is activated
  - Pointer lock functionality with or without full screen
- Test Plan: [Pointer Lock API Improvement Test Plan](#)
- Detailed Test Results: [Test Run Results](#)

### 4. Reported bugs for this build:

- Full list with the logged bugs can be found at: [Logged Bugs](#)

### 5. Known Issues for this build:

- **High impact issues:**

- none
- **Low impact issues:**
  - [Bug 1287104](#) - PointerLock demo can't be enabled after changing focus
  - [Bug 1288692](#) - After Web Console is opened - full screen is entered on a PointerLock demo instead of just entering PointerLock
  - [Bug 1289403](#) - [e10s] PointerLock works very slow on Nightly and Aurora with this site <http://mdn.github.io/pointer-lock-demo/>

**Regards,
