

B2G Music Application

Application Wireframes

V2

05-10-12

When the user first arrives at the music player, they are presented with the Music Home page which showcases generated playlists and album artwork in an interesting and dynamic way.

1. Selecting flathead will shuffle play playlist. Selecting Album art will play album or artist.

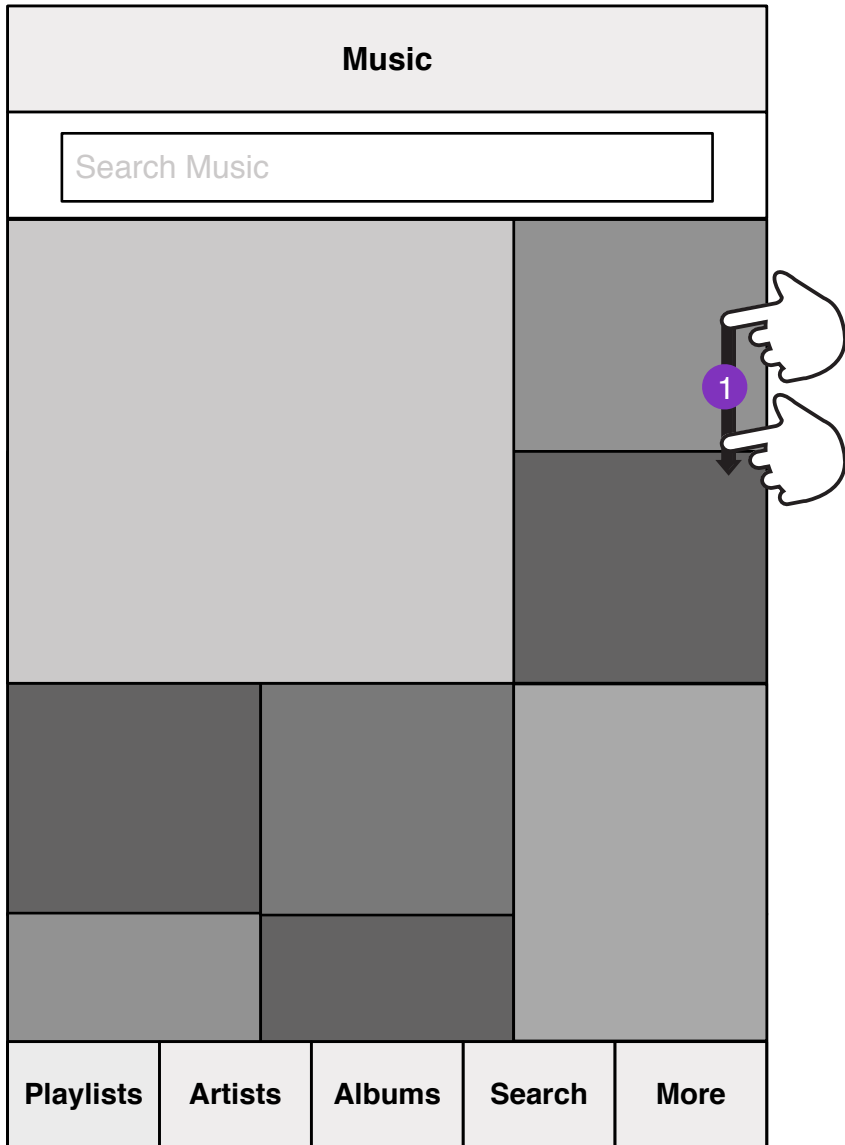

2. If music is playing, a song marquee shows here (see next page), tapping it will take you directly to the Player Screen.

3. More
 - Audio Books
 - Podcasts
 - etc.

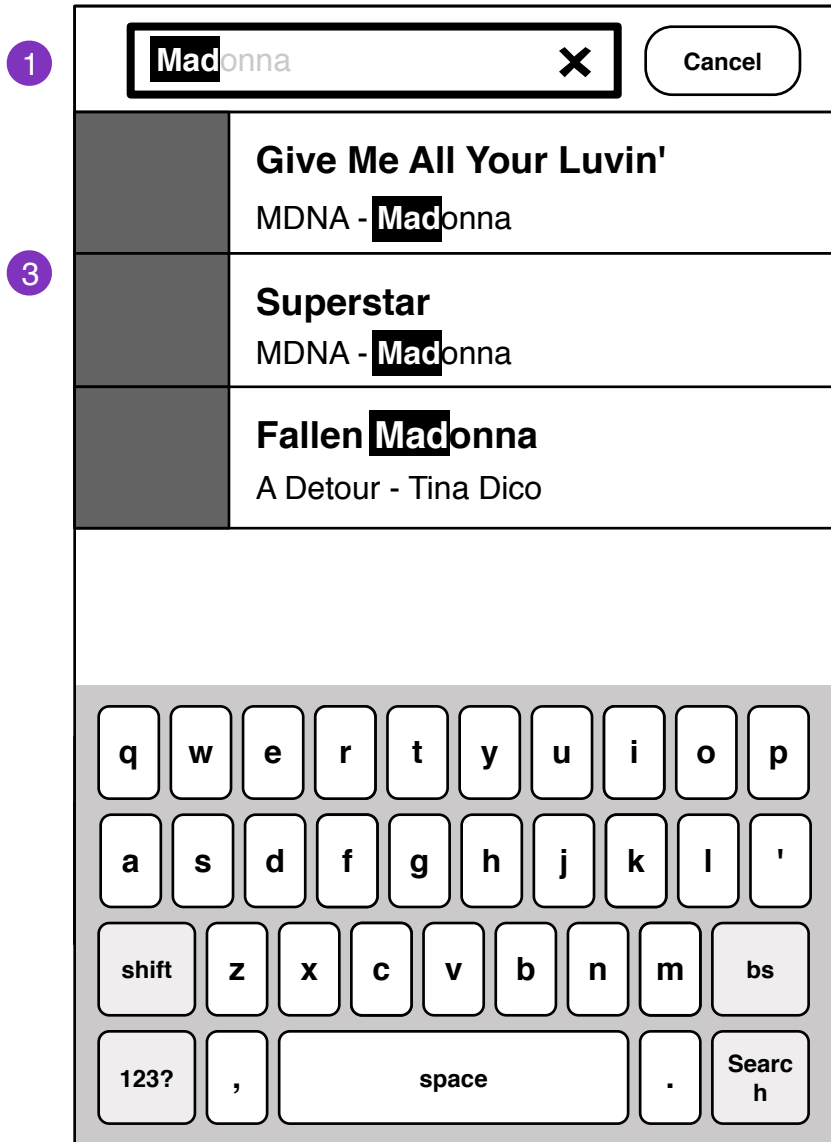

Favs should be left ambiguous for future possibilities:
 - genius like recommendations
 - favorites based on top listened or rated tracks, or combination of both.

1 Give Me All Your Luvn' - Madonna				
Playlists	Artists	Albums	Search	More

1. If music is playing, the song-artist shows here and slowly marquees to the left, tapping it will take you directly to the Player Screen.

1. Pulling down at the top of any list content will reveal search bar.

1. Music heading hides. Search field focused.

Interaction notes:

- Search field auto-hints as you type.
- Pressing 'X' at the end of the field, clears the search field.

2. Cancels search

3. Substring highlights in results
