Contacts Browser
Contacts Browser:
Overview

Characteristics

- Enable
- User selects an “Add” button.
- They are taken to a full screen list of all available contacts, with options to filter-search the list. “Cancel” closes the Browser without making a select.
- Tapping a contact closes the Browser and adds the selected contact to the selected field.

Used for

- Selecting a contact to add to a correspondence (eg: Email, Message)

Contacts
Quick Select
Contact Quick Select: Examples

Characteristics

- The user highlights an entry field (eg: To), and the keyboard appears.
- As the user types, the system attempts to draw matches from the contacts.
- If one or matches are found, a small list appears, highlighting the matching contacts.
- To make a selection, the user can tap one of the rows, closing the list and adding that contact to the highlighted field.
  - Alternatively, if the user wishes to clear the list, they can type Backspace until the field is clear, and there are therefore no more matches. The list then disappears.

Used for:

- Selecting a known contact quickly, without leaving the current view.

Dialogue: Popups
Popups: Overview

Characteristics

- User presses-and-holds a selectable item (can be a list row, a phone number, a browser link, etc)
- Menu displaying one of more options pops up after X seconds.
- Menu positions itself immediately above or below the selected element (depending on the amount of available screen space)
- Optional: the selected element is visually highlighted in some way (e.g.: darken surrounding content, or draw border, etc)
- User can press anywhere else on screen to change the focus and close the popup.

Used for:

- ...

Dialogoues:
Toasts
Toasts:
Overview

Characteristics

• Typically appear after a multi-select edit. eg:
  • Deleting multiple photos from (Gallery)
  • Deleting multiple emails (Email)
  • Moving multiple emails (Email)
• Toasts are positioned at the bottom of—and layered on top of—their associated content view.
• Toasts should be non-intrusive, and never cover up other UI elements (eg: toolbar, tabs, etc).

Used for:

• Toasts confirm a user action, and optionally provide a follow up action (eg: Undo).

Gaia UX
Patterns &
Building Blocks:

Drawer
Drawer: Overview

Characteristics

- Provides access to top level navigation links that are usually user-configurable (eg: accounts in Email and Calendar, or tabs in Browser).
- Is also a great place to tuck secondary or power-user features, such as links to app Settings.
- Position: Should be positioned on left side of screen, but can be positioned on right in rare circumstances (eg: Browser).
- Open: should be opened via standard "Drawer" button, but other buttons can be used in rare circumstances (eg: numeric tabs button in Browser).
- Close: can be closed by tapping viewable area of the primary interface. And in future versions by swiping horizontally from bezel.
- Traditionally visually depicted as being one layer below the primary interface, and sliding in from the side via animation.
- Width: variable, but must always leave sufficient room for the "Drawer" button on the primary interface to remain fully visible.

Used for:

- Providing access to top level navigation links that may be too numerous for a Tabs pattern, or user-generated, (eg: Tabs, user accounts etc).
Gaia UX
Patterns &
Building Blocks:

Entry Sheet
Entry Sheet: Overview

Characteristics

- Occupies the full screen
- User should be given impression that they are on the same page, and that the Entry Sheet is merely a temporary modal overlay. They have not navigated one level deeper in the hierarchy.
- To reinforce this...
  - Valid animations could include slide in from top, from bottom, cross fade, scale in, etc.
  - “Cancel” buttons are used instead of “Back”.
- Every element within the Entry Sheet must be related to adjusting the single setting; Settings Panels should not contain links to other pages or lists.
- Closing:
  - “Cancel”
  - Varies: “Done”, “Join”, “Send”, etc.

Used for:

- **The user wants to edit a single setting that:**
  - Contains a large number of possible values.
    - eg: Text entry forms, long lists,
  - [or] Requires multiple inputs or selections
    - eg: WiFi network connection process.

Patterns &
Building Blocks:

Filters
Filters: Overview

Characteristics

- Horizontal sequence of buttons.
- Only one button is Focused at a time.
- Best practice is to place filters within Toolbars, so they do not flow with the content.
- Left, Middle and Right buttons can be styled uniquely.
- Width: variable, depending on number of filters required within a single set (see Numbering). Should establish a maximum width, however.
- Numbering: minimum 2, maximum 5.
- Can be populated with icons or text, but not both. Because of the smaller height of a filter (versus a tab), text is the best practice.

Used for

- **Secondary Navigation**
  - Filters can provide a second set of tabs, where tabs are already present.

- **Data Filter**
  - Filters can be used to enable the user to view a single set of data in a different lens.
  - eg: in Calendar, the filters they allow user to view time in different scales, from Day to Month).

Button states

- Normal
- Focused
- Disabled
Need to add mockups..
Gaia UX
Patterns &
Building Blocks:
Headers
Headers:

Overview

Characteristics

- Horizontal full width bar that appears at top of screen in most apps
- Floats above content, with option to flow with content in some rare cases (eg: Browser).
- Heading text provides name of current view.
- Optional: heading text string can include text (eg: current unread email count)
- Present in most applications

Used for

- ...
Need to capture all headers...
Need to add mockups..
Multi Select
Multi Select:
Overview

Characteristics

- Is entered by...
- Is a “mode”, not a section. Animation and visual design should give user the impression that they are in a temporary mode within the original view, not that there are in a different view.
- Can be called “Edit” or “Select” mode, depending on the use case.
- Header text should indicate action being taken (eg: “Select photos”). Once an item has been selected, text should update to “X selected”, where X = quantity of selected items.
- Closes once the user:
  - ...completes one of the available actions (eg: “Delete”).
  - ...or taps “Cancel” button.
- Closing returns user to the previous view.
- If user has taken action (eg: delete 3 message threads), a Toast should appear, confirming the action.

Used for

- Enables user to perform “bulk actions”, such as deleting 6 emails from a roll of 20, or selecting 3 photos to email to a friend.
- Is used on lists of items (eg: vertical list of emails in Inbox, or grid of photos in Gallery)

States

- Normal
- Focused
- Disabled

Toolbars
Toolbars: Overview

Characteristics

- 100% wide Horizontal element.
- Fixed height, consistent system-wide.
- Does not scroll with content. Floats above.
- Contents inside toolbar do not scroll.
- Positioned at bottom of screen.
- Can contain various elements (buttons, filters, indicators, etc).

Used for

- Contains actions and/or navigation associated with the currently-visible view. eg:
  - Delete selected items (button)
  - Refresh content (button)
  - Enter “Edit” mode (filter)
  - View “Favorite” contacts only (filter)
- Can also contain progress or activity indicators (this is less common, though).
